	<p>1.All parameters are specified at 230VAC input, rated load, 25℃ 70% RH ambient.</p> <p>2.Ripple & noise are measured at 20MHz by using a 12" twisted pair terminated with a 0.1uf & 47uf capacitor.</p> <p>3.Tolerance: includes set up tolerance, line regulation, load regulation.</p> <p>4.Line regulation is measured from low line to high line at rated load.</p> <p>5.The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives.</p> <p>6. Length of set up time is measured at first cold start. Turning ON/OFF the power supply may lead to increase of the set up time.</p> <p>7. Derating may be needed under low input voltage. Please check the derating curve for more details.</p>
